You installed the drivers and the 86142B would appear in MAX under Miscellaneous VISA sources I believe the driver came with some sample applications as well to help get you started I tried searching google but no luck. Follow the directions from there. Once it is detected and listed, it will be available as a VISA resource in LabVIEW.Thanks again, Carlos Mayer. What does it mean Has anybody ever had some problem similar to that. Ah, another point is in the Device Status from MAX that it is written VISA returned this static device when finding resources, and MAX could use VISA to parse the resource name. MAX could not succesfully open a VISA session to the device. You may not experience any problems using this device if your application does not require the unavailable functionality. Thanks in advance, Carlos Mayer. This is information that you need to get from the manual or vendor.Any idea about what it might be. Any clue will be very useful. Thanks, Carlos Mayer. It makes no mention of VXI11 LAN. I have no idea what SICL LAN is. Maybe you should ask Agilent how to use it with LabVIEW.Anybody know how to correct it Thanks All rights reserved. MtlTeadrinker 1.0 out of 5 stars To block the stairs on the main level in our split level home, we needed one mounted between metal railings at the top of the stairs and one mounted beside it between a metal railing and a wall at the bottom of the stairs. The rail sockets are the wrong size so we couldnt use them to mount on our standard size railings.

Even if we could, it is only designed as a pressure mount, so it cannot be used on stairs anyway. I didnt have enough information from the outside of the box to determine this before I bought it. BROKE, POOR QUALITY We didnt bother returning it thinking wed use a pressure mounted gate elsewhere. My husband broke the handle looking at it with the instructions when he was ready to set it up. I dont expect my guests to read the instruction manual on our baby gates in our home, so I

dont think it would stand up well to a few years of use, even if it hadnt broken the first time. It was months later and broken so we couldnt return it to the store. NOT SATISFACTORY CUSTOMER SERVICE I sent a copy of the receipt, a picture of another brand of gate installed successfully, a picture of the broken gate still with the original box, and a polite letter explaining why I was dissatisfied and why the outer box was misleading, and asking clearly for a refund or credit for another of the manufacturers baby products. They sent me a new handle, but did not say anything about my request for a refund or credit, nor did they acknowledge my complaint that the package was misleading. We installed the Evenflo wooden gates in that location instead. These are wood and look so much nicer, and have held up well after 4 years of use. Buy those instead!The teeth on the handle and rail are so big that if the space isnt exactly right, the handle wont go into the lock position, and then what. You got a useless gate. The return department at WalMart said that a ton of these come back. Dont buy Stupidgate.Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Es muy recomendable para mascotas.Sorry, we failed to record your vote. Please try again One thing I like about this pet gate is the ability to choose whether it swings towards you or away from you. With simple twohole axis brackets, you can easily switch directions without remounting the whole thing. I found it necessary to go by my own measurements instead of the instruction sheet when it came to spacing for drilling the pilot holes. For instance, I needed to hang the gate a little closer to the floor so rambunctious kittens can't slip underneath the bottom of the gate. Using the bottom mount as a starting point, installing the gate was pretty straightforward, which is a good thing. After putting the gate up in one doorway, I realized it would be better located in another doorway. That meant a second installation, but it went quite smoothly, with little to no frustration. Since I'm using this with kittens, the one thing I wish was different is the height. I'd like to see an optional, taller gate. All in all, though, the MYPET Pet Gate is an excellent choice and installation is pretty painless.Sorry, we failed to record your vote. Please try again I had trouble adjusting it to fit my stairway, as it was too stiff to pull out easily. My old gate was easy to adjust, and fit securely. I ended up putting pieces of wood on the ends to give it a more secure fit It will not be secure if the dogs jump up on it or push it, but I put plants in front of the gate to keep the dogs away. It will do, and because its plastic, it can stay outside. I may try to attach it permanently and make it more secure. This gate is replacing my old gate that we used for 10 years and finally fell apart. I can only hope that this one will last half that long!Sorry, we failed to record your vote. Please try again I couldnt believe when I stumbled upon this one the price was just amazing and it came with all the necessary parts.

The holders are just areas that the gate uses as pressure points they keep the gate from moving around while its in place. I did it by myself and it took a total of 15 minutes. Once the holders were installed, you just put the gate in using the pressure mounting system. This is a little annoying since you need to make sure the gate is perfectly aligned with the holders, and its a bit difficult to do alone. Taking the gate down is very easy pull and turn the lever to release the pressure lock, then close it and put it to the side. Because its annoying to put the gate up though, we end up not using it as often as we should. It would be a perfect gate for low traffic areas, but in high traffic, its just a pain to keep putting it back on. It takes at least 23 minutes to attach it properly maybe a little less if you have help from somebody else So while this gate is great for what it is, it doesnt fully serve my purposes which is why I had to give it 4 stars. I will have to buy another gate for the bottom of my

stairs, but I will keep this one to be used at a lowertraffic location.Sorry, we failed to record your vote. Please try again For now, I just secured with the pressure support option. Just bracing it between my railing and my siding of home, closing off the stairway of my deck. Having just put up yesterday and letting my pups run around the deck while I sat and watched was so exciting. I didnt have to have them on leash. They could run about the deck and I had no worry of them running off. I can have my coffee, they can play. I can go in for a refill without having to take them inside with me. Our development doesnt allow us to keep dogs outside unattended, but this is also nice while Im gardening, and they be still be outside, secured but free. I will admit, I bought the least expensive gate, as I needed two and didnt want to spend a fortune. I just wanted to close off the entrance ways, but also didnt like just using a barricade or pressure held gate.

The convenience of this opening and closing without having to realign each time really relieves the stress one may have having two active puppies, or even grown dogs. I imagine this would be great as security for your baby or infant toddler as well. Seeing as it is listed as a Baby Safetypet gate, gave me additional confidence in that if it was safe for a human baby, it would be just as good for your k9 companion.Sorry, we failed to record your vote. Please try again It will not accommodate the difference in width of the doorway between the molding at the bottom and the width of the rest of the door. However, I was able to easily mitigate this issue by simply installing the gate just above the molding leaving a space at the bottom that is not a problem for my smallish dog. Beyond that, individual differences may vary. 2. Once you install it, you have to take it down uninstall it, essentially each time a person wants access to the other room. Its an inexpensive solution for sure and I found the gate I tried prior to this one Regalo Easy Step Walk Through Gate, with the swinging door, had issues with too much space on each side of the gate to be safe for my dog so for me, this is the best solution.Sorry, we failed to record your vote. Please try again No more dirty pawprints on my floor after running around my yard. No more doggie invasion under my dining table when having people over for dinner. No more doggie runaways when bringing in groceries. This gate is super simple to install and remove just open to width, push the lever down and pop into the opening, and do the reverse to remove even my 76 year old mother can do it. It holds really well, even with slightly uneven walls or openings. My cats can jump on and over it no problem, and my dogs can lean on it with their paws without moving it. I love the freedom I have by purchasing this gate I feel like I have control of my home again. Thank you North States for making such a well made, easy to use gate!

Sorry, we failed to record your vote. Please try again It wasnt easy for me to lock into place or reopen. I was so dissatisfied that I immediately returned it. It did not seem like I could securely and easily open and close while holding a toddler.Sorry, we failed to record your vote. Please try again Helps keep baby safe. I like that its expanable to make sure its the perfect fit. My baby is still young so it act as a baracade to prevent her from roaming throughout the house. Not sure how durable it is for when she turns two years old. But for now.at the crawling and cruzing stage it seems fine and does a good job. Pros Affordable Durable for babys current age and movement Expandable to make a perfect fit I can choose which direction the gate will open It can be used as a portable gate. For example The gate can easily and quickly be taken off the hinges by an adult. And carried to a friends or relatives home. Cons Dont know how durable or secure gate will be once baby starts walking etc. It seems like once baby starts walking she can press her weight against it and I dont know how durable the gate will be at that point. Becaue the gate oes not appea to be strong enough to withstand a babys pressing their weight against it. Perhaps it will be secure. But I dont know. Once baby starts walking I will update this post. PS. Not sure if this has to do with the product or just something you need to consider before purchasing. I placed the safety gate at the bottom of my stair case using a stud finder to secure the gate into the wall. The gate came unsecure very easily. This product does not supply screws that is used with sheet rock. I am having a difficulties securing the gate at that location using screws. However, because my baby is still at the crawling stages I use the

pressure mounting to secure the gate at the bottom of the stair case. The gate is safely and securely attaches everywhere else it is placed at. But overall, I am happy with the prouct.

It is a good deal for the price. I will recommend it.Sorry, we failed to record your vote. Please try again We have a large lab who stays contained with it, but it is low enough for the cat to jump over so we can let the dogs roam, but still use it to contain her litter box when were home. It is also low enough for an adult to step over so it doesnt need to be taken down every time you need to pass. Its gotten a lot of abuse over the years since not everyone is graceful enough to step over it unscathed, but the plastic is pretty heavyduty so the gate has always won those battles and remained in tact. It is easy to move if need be we move it at least twice a day and has bumpers on the sides so it doesnt damage the sheetrock walls as some other gates do. I took a look at some of the other reviews negative ones and almost want to go home tonight an see if I can break the gate. I think that the breaking and impossible to use comments probably have more to do with user errors than the products quality. I wouldnt recommend buying a more expensive one unless you have older people that need the built in door to get through the gate or are looking for a style that matches your decor.Sorry, we failed to record your vote. Please try again For an agile, medium to large dog, they can probably jump this gate, but you could stack two if your doorway allows. Ive successfully done this, with the lower gates handle facing inwards and the upper gate facing towards me. At first, the gate appears a little stiff but once you use them and become in tune with how to work them, they are GREAT. Very sturdy and easy to mount. They come fully assembled. You lift the handle up, place the gate, expand to the desired width and then lower the handle with gentle force until it grips one of the notches. If it isnt, just slide the handle one notch further down or readjust the width if you got it too short. I only ever had one wear out over a period of years and I use them a lot.

Would recommend to people with pets and kids.Sorry, we failed to record your vote. Please try again Just one, he can hop over found that out the hard way one day. The gate can be put in place fairly easily, and Ive gotten the hang of doing it with one hand while holding the dog in the other. The grip, once closed, is excellent. If you use this for dogs, and have a dog larger than toysized, youll want to put the gate on the INSIDE of the door frame, so if the dog pushes out against it, the bumpers will hit the trim where the door closes and stay put. Build quality is a very solid plastic, and the lever which locks the door in place doesnt feel like itll break easily. Ive been using these for about three months now, every day, and have zero complaints about them.Sorry, we failed to record your vote. Please try again.
